

Vacuum-Compact Systems

SIHI^{modular}

PL 91 M, PL 126 M, PL 161 M

Pressure range: 33 to 1013 mbar
Suction capacity: 24 to 195 m³/h

DESIGN AND CONSTRUCTION

The SIHI^{modular} systems consist of a various components which are assembled together to form a compact unit. Each unit can be varied in accordance with the respective application. The LEM liquid ring vacuum pump utilised in these systems is of a single stage design and of a simple and robust construction with the following features:

- Non polluting due to near isothermal compression
- Oil free, no lubrication in the working chamber
- Capable of handling nearly all gases and vapours
- Small quantities of entrained liquid can be handled
- Easy to maintain and reliable operation
- Low noise and virtually free from vibration
- Anti cavitation protection as standard

The SIHI^{modular} systems are offered as a service liquid saving arrangement and can be supplied with or without a heat exchanger.

APPLICATION

As with the other SIHI liquid ring vacuum pumps this type is also capable of handling dry and saturated forms of gases. Small quantities of entrained liquid in the suction gas stream can also be dealt with. The SIHI^{modular} is designed for vacuum applications of between 33-900 mbar, however, this range can be extended when used in conjunction with the respective gas operated ejector. (See standard catalogue for details).

GENERAL TECHNICAL DATA

	Unit	PL 91 M	PL 126 M	PL 161 M
Speed	rpm	2900 3500		1460 1750
Max. compression over pressure *)	bar		0,3	
Max. admissible pressure difference *)	bar		1,1	
Hydraulic test (over pressure)	bar		3	
Moment of inertia of the rotating pump parts and of the water filling	kg · m ²	0,007	0,009	0,070
Sound pressure level at a suction pressure of 80 mbar (standard values)	dB (A)		77	70
Service liquid volume up to shaft level	liter	14,5	14,6	16,0
Max. flow resistance of the heat exchanger	bar		0,2	

The combination of several limiting values is not admissible.

*) In this case special measures should be taken for the separator.

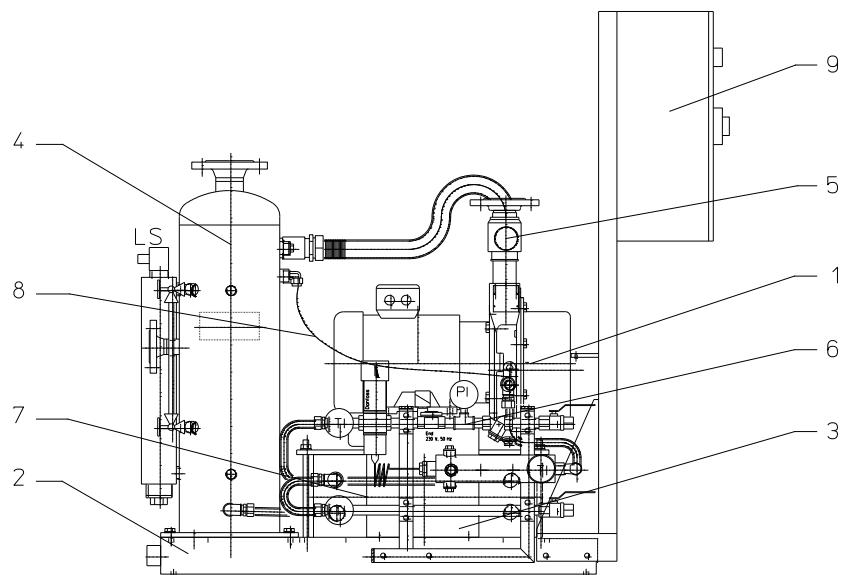

Example: PL 91 M.A.M 55 0.0A

NOTE

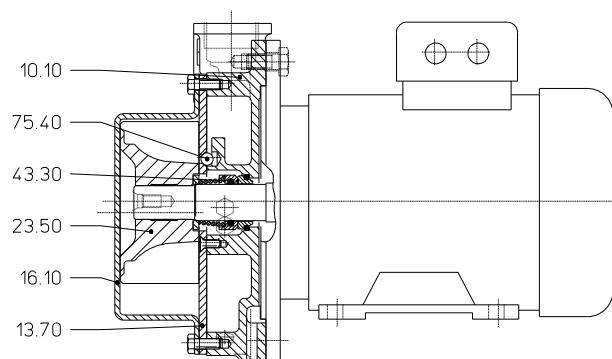

During its operation, the liquid ring vacuum pump must be continuously supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression, and to prevent the pump from dry running operation. The service liquid is separated from the process gas in a separator. Dependent on the chosen arrangement and proposed application, the necessary service liquid can be either totally or partially recirculated within the system, conserving the amount of fresh make up liquid required. However, when using the total recirculated arrangement, the operating suction pressure must be 800 mbar or lower. The direction of rotation is clockwise when viewed from the drive end of the pump.

SIHI^{modular} - Construction types

for combined liquid service without heat exchanger

Vacuum compact system equipped with:

- Manual service liquid regulation
 - Ball type non-return valve
 - Anti cavitation protection
 - Mounting feet of rubber or mounting rails
- Designation **M 10 0** (Low Cost-construction type)

Additional options:

- as above, but thermostatic service liquid regulation (regulating range 0 - 30 °C)
Designation **M 15 0** (Base-construction type)
- as above, but with service liquid low level monitoring device for conductive liquids
Designation **M 20 0** (High Class-construction type)
- as above, but with additional standard electric control
Designation **M 25 0** (High End-construction type)

Example: PL 91 M.A.M 15 0.0A

with plate heat exchanger (closed circuit)

Vacuum compact system equipped with:

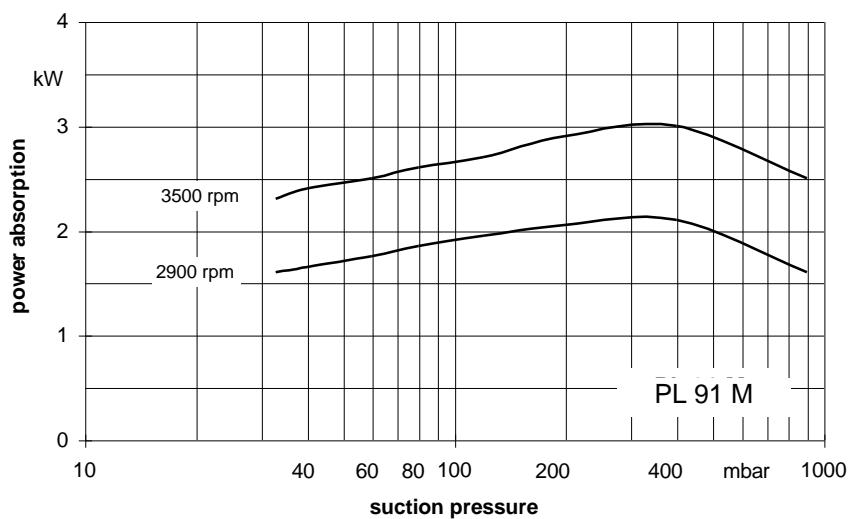

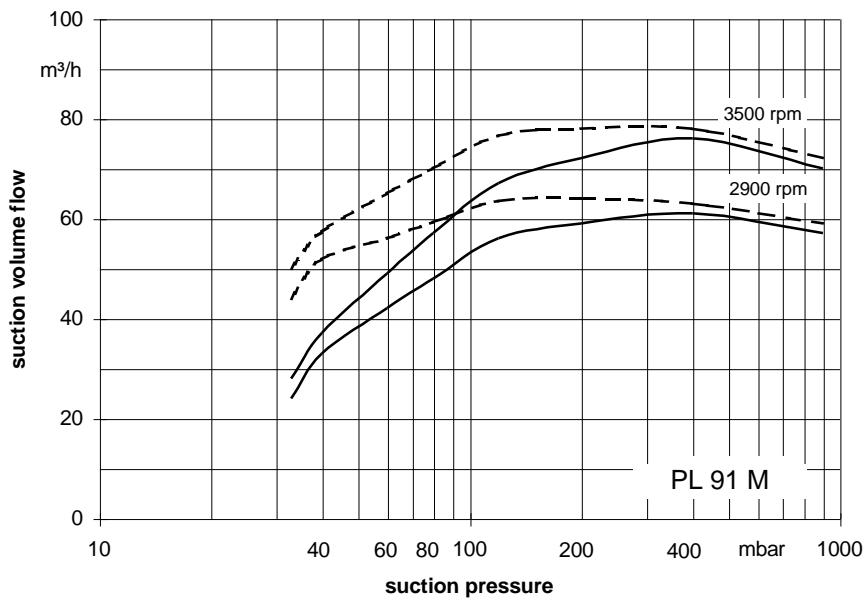

- Plate heat exchanger (screwed)
 - Thermometer between heat exchanger and pump
 - Ball type non-return valve
 - Anti cavitation protection
 - Mounting feet of rubber or mounting rails
- Designation **M 40 0** (Low Cost-construction type)

Additional options:

- as above, but with level dependent service liquid replenishing for conductive liquids
Designation **M 45 0** (Base-construction type)
- as above, but with cooling water connection at the heat exchanger, thermostatically regulated (regulating range 0 - 30 °C).
Designation **M 50 0** (High Class-construction type)
- as above, but with additional standard electric control
Designation **M 55 0** (High End-construction type)

Example: PL 161 M.A.M 50 0.0A

Suction volume flow and power absorption PL 91 M

The operating data are applicable under the following conditions:

- pumping medium: - dry air: 20°C
 - water vapour saturated air: 20°C _____
- service liquid: - water: 15°C

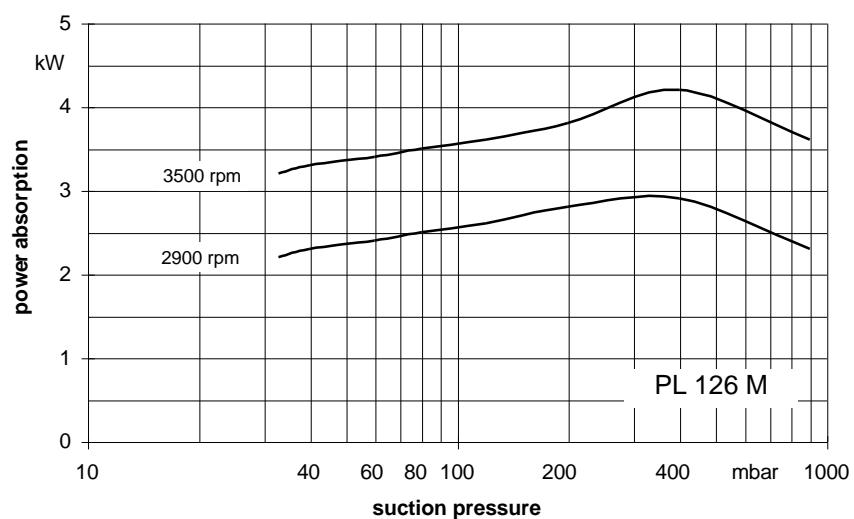

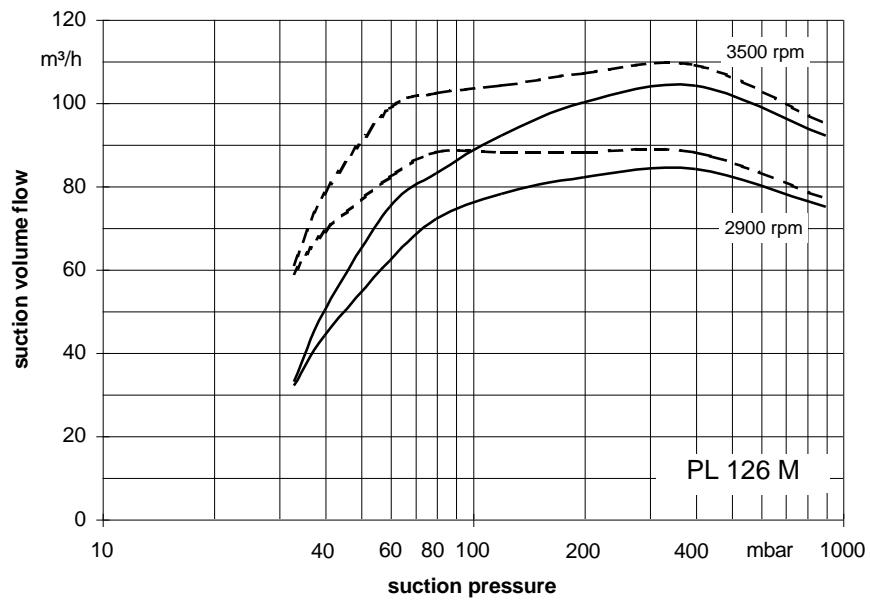

Discharge pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10%

Max. fresh water need with lowest suction pressure

Suction volume flow and power absorption PL 126 M

The operating data are applicable under the following conditions:

- pumping medium:
 - dry air: 20°C _____
 - water vapour saturated air: 20°C _____
- service liquid:
 - water: 15°C

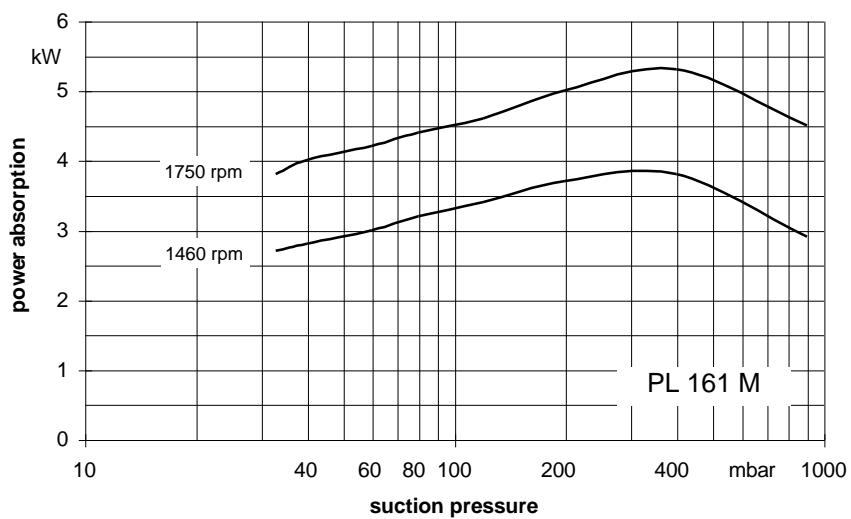

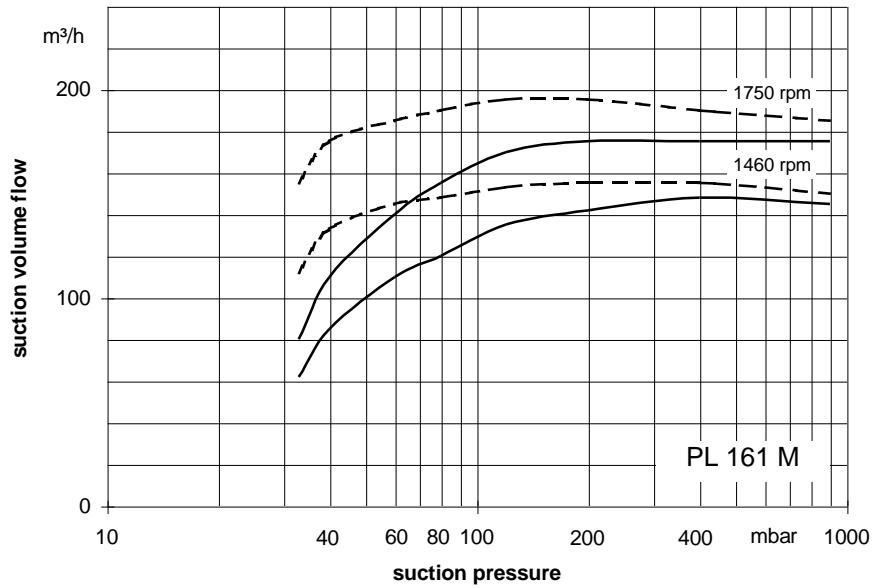

Discharge pressure 1013 mbar (atmospheric pressure)

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10%

Max. fresh water need with lowest suction pressure

Suction volume flow and power absorption PL 161 M

The operating data are applicable under the following conditions:

- pumping medium:
 - dry air: 20°C _____
 - water vapour saturated air: 20°C _____
- service liquid:
 - water: 15°C

Discharge pressure 1013 mbar (atmospheric pressure)

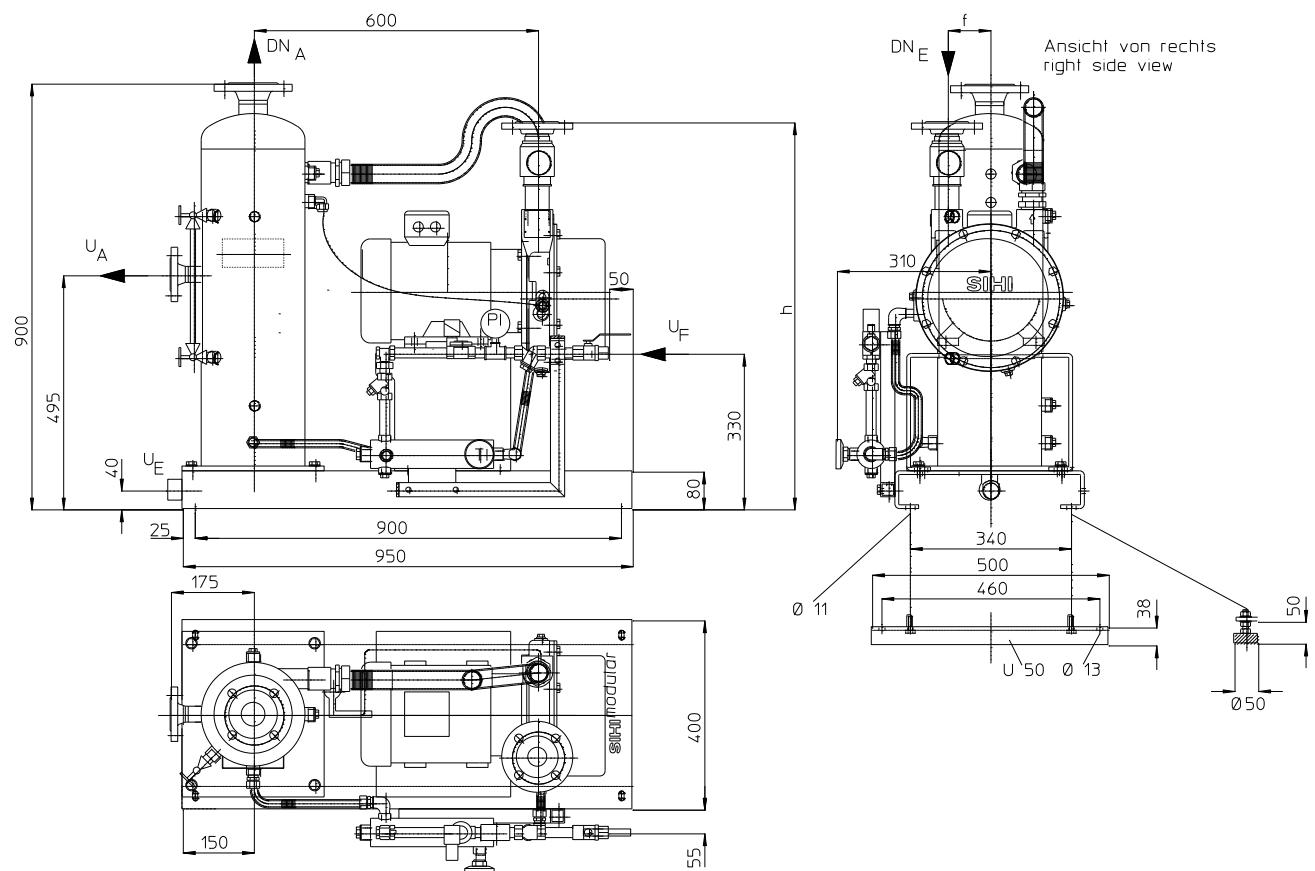

The suction volume flow is applied to the suction pressure

Tolerance of the operating data 10%

Max. fresh water need with lowest suction pressure

SIHImodular - for combined service liquid without heat exchanger

- Construction type M 10 0**
- Manual service liquid regulation
 - (Low Cost-construction type)
 - Ball type non-return valve
 - Anti cavitation protection
 - Rubber mounting feet or mounting rails

SIH^{modular} - with plate heat exchanger (closed circuit)

- Construction type **M 55 0** with:
- (High End-construction type)
- Plate heat exchanger (screwed)
 - Thermometer between heat exchanger and pump
 - Ball type non-return valve
 - Anti cavitation protection
 - Rubber mounting feet or mounting rails
 - Additional service liquid replenishing for conductive liquids, level dependent
 - Additional cooling water connection at the heat exchanger, thermostatically regulated (0 - 30 °C)
 - Additional standard electric control, steel plate enclosed

Remarks:

Standard systems will be supplied with solenoid valve coils 230 V, 50 Hz and upon special request with coils 24 V DC, without extra price.
 Level monitoring devices need a supply voltage of 230 V, 50 Hz and upon special request with coils 24 V DC, without extra price.
 The mentioned standard electric controls are equipped with a separate control transformer 400 / 230 V, 50 Hz.

Systems for other voltages and frequencies available on request.

Other material combinations upon request.

Level monitoring devices for non-conductive liquids upon request.

Accessories:

Suitable system accessories are available:

- **Gas ejector, type GEV 91 A / GEV 126 A and GEV 161 A** for a service liquid temperature of **15 °C**
- **Gas ejector, type GEV 91 B / GEV 126 B and GEV 161 B** for a service liquid temperature of **30 °C**
- **Preseparator** with flushing and draining connection for the separation of solids at suction side.
- **Ball valve** for draining of the separator.

Any changes in the interest of the technical development are reserved.
